

Parts Breakdown

Fig#	Part Name	Qty.	Fig#	Part Name	Qty.
1	HEX BOLT M8X20	1	34	RIGHT HANDLE	1
2	FLAT WASHER Ø8×Ø22×2	3	35	SWITCH	1
3	OUTER FLANGE	1	36	CORD CLAMP	1
4	INNER FLANGE	1	37	CROSS TAPPING SCREW ST4×14	1
5	CROSS SCREW M4X8	3	38	LEFT HANDLE	1
6	BEARING RETAINER	1	39	CROSS TAPPING SCREW ST4×16	9
7	CROSS SCREW M4X8	1	40	PLASTIC LOCKING WRENCH	1
8	PLASTIC WRENCH OF BLADE GUARD	1	41	CROSS SCREW M5X14	1
9	BLADE GUARD	1	42	AUXILIARY HANDLE COVER	1
10	SPRING OF BLADE GUARD	1	43	HEX SCREW (BLACK Nİ)	2
11	SPINDLE	1	44	CROSS SCREW M5X25	1
12	WOODRUFF KEY 4×Ø13	1	45	CROSS SCREW M5X25	1
13	BALL BEARING 6203-2 RS/SYBS	1	46	CROSS SCREW M5X80	2
14	GEAR	1	47	FLAT WASHER Ø5	1
15	SHAFT COLLAR Ø17	1	48	WINDSHIELD	1
16	CROSS SCREW M5X14	4	49	STATOR	1
17	FRONT COVER	1	50	CROSS SCREW M4X6	1
18	BALL BEARING 608-2Z/SYBS	1	51	ALUMINUM MOTOR HOUSING	1
19	CROSS SCREW M5X10	2	52	HEX SOCKET SCREW M5X8	2
20	CROSS SCREW M5X8	1	53	BRUSH HOLDER	1
21	ALUMINUM GEAR HOUSING	1	54	CARBON BRUSH SET 18×17×7	2
22	SHAFT LOCK	1	55	BRUSH HOLDER CAP	2
23	BALL BEARING 6002-2RZ/BAW	1	56	CORD 3X1X3	1
24	ROTOR	1	57	CORD GUARD	1
25	BALL BEARING 6200-2RS/BAW	1	58	PLASTIC WING NUT M6	2
26	CROSS SCREW M5X10	2	59	FLAT WASHER Ø6	2
27	Washer Ø5	4	60	SMALL SCREW M6X14	2
28	CROSS SCREW M6X20	1	61	BASE SET	1
29	RUBBER WASHER Ø18×Ø6×18	1	62	PLASTIC WING SCREW M6X16	1
30	CROSS SCREW M6X16	2	63	LOCKNUT (BLACK Nİ)	1
31	ADDITIONAL HANDLE	1	64	FLAT WASHER Ø8×Ø15×1	1
32	SMALL SCREW M8X20	1	65	Pin Ø8×50×M6	1
33	BASH LOCK M8×Ø5	1	66	SOCKET WRENCH M8	1

IDEAL

CIRCULAR SAW ID WCS305N Part No.: 28747

OPERATION INSTRUCTIONS

Read through carefully and understand these instructions before use.

SPECIFICATIONS

Model		ID-WCS305N
Blade diameter		335 mm (12")
Max. Cutting depth	at 3°	117 mm (4-3/5")
	at 45°	88 mm (3-1/2")
No load speed (RPM)		3,700/min

- Due to our continuing programme of research and development, the specifications herein are subject to change without notice.
- Note: Specifications may differ from country to country.

GENERAL SAFETY RULES

WARNING! Read all instructions. Failure to follow all instructions listed below may result in electric shock, fire and/or serious injury. The term "power tool" in all of the warnings listed below refers to your mains-operated (corded) power tool or battery-operated (cordless) power tool.

SAVE THESE INSTRUCTIONS.

Work area safety

1. **Keep work area clean and well lit.** Cluttered and dark areas invite accidents.
2. **Do not operate power tools in explosive atmospheres,** such as in the presence of flammable liquids, gases or dust. Power tools create sparks which may ignite the dust or fumes.
3. **Keep children and bystanders away while operating a power tool.** Distractions can cause you to lose control.

Electrical Safety

4. **Power tool plugs must match the outlet.** Never modify the plug in any way. Do not use any adapter plugs with earthed (grounded) power tools. Unmodified plugs and matching outlets will reduce risk of electric shock.
5. **Avoid body contact with earthed or grounded surfaces** such as pipes, radiators, ranges and refrigerators. There is an increased risk of electric shock if your body is earthed or grounded.
6. **Do not expose power tools to rain or wet conditions.** Water entering a power tool will increase the risk of electric shock.
7. **Do not abuse the cord.** Never use the cord for carrying, pulling or unplugging the power tool. Keep cord away from heat, oil, sharp edges or moving parts. Damaged or entangled cords increase the risk of electric shock.
8. **When operating a power tool outdoors,** use an extension cord suitable for outdoor use. Use of

a cord suitable for outdoor use reduces the risk of electric shock.

Personal Safety

9. **Stay alert, watch what you are doing and use common sense when operating a power tool.** Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication. A moment of inattention while operating power tools may result in serious personal injury.
10. **Use safety equipment.** Always wear eye protection. Safety equipment such as dust mask, non-skid safety shoes, head hat or hearing protection used for appropriate conditions will reduce personal injuries.
11. **Avoid accidental starting.** Ensure the switch is in the off-position before plugging in. Carrying power tools with your finger on the switch or plugging in power tools that have the switch on invites accidents.
12. **Remove any adjusting key or wrench before turning the power tool on.** A wrench or a key left attached to a rotating part of the power tool may result in personal injury.
13. **Do not overreach.** Keep proper footing and balance at all times. This enables better control of the power tool in unexpected situations.
14. **Dress properly.** Do not wear loose clothing or jewellery. Keep your hair, clothing, and gloves away from moving parts. Loose clothes, jewellery or long hair can be caught in moving parts.
15. **If devices are provided for the connection of dust extraction and collection facilities,** ensure these are connected and properly used. Use of these devices can reduce dust-related hazards.

Power tool use and care

16. **Do not force the power tool.** Use the correct power tool for your application. The correct power tool will do the job better and safer at the

MAINTENANCE

⚠ CAUTION:

- Always be sure that the tool is switched off and unplugged before attempting to perform inspection or maintenance.

1. Adjusting screw
2. Base

Adjusting for accuracy of 90° cut (vertical cut)

This adjustment has been made at the factory. But if it is off, adjust the adjusting screw with a screwdriver while squaring the blade with the base using a triangular rule, try square, etc.

1. Triangular rule

1. Limit mark

Replacing carbon brushes

Remove and check the carbon brushes regularly. Replace when they wear down to the limit mark. Keep the carbon brushes clean and free to slip in the holders. Both carbon brushes should be replaced at the same time. Use only identical carbon brushes.

1. Brush holder cap
2. Screwdriver

Use a screwdriver to remove the brush holder caps. Take out the worn carbon brushes, insert the new ones and secure the brush holder caps.

To maintain product SAFETY and RELIABILITY, repairs, any other maintenance or adjustment should be performed by IDEAL Authorized or Factory Service Centers, always using IDEAL replacement parts.

rate for which it was designed.

- Do not use the power tool if the switch does not turn it on and off. Any power tool that cannot be controlled with the switch is dangerous and must be repaired.
- Disconnect the plug from the power source and/or the battery pack from the power tool before making any adjustments, changing accessories, or storing power tools. Such preventive safety measures reduce the risk of starting the power tool accidentally.
- Store idle power tools out of the reach of children and do not allow persons unfamiliar with the power tool or these instructions to operate the power tool. Power tools are dangerous in the hands of untrained users.
- Maintain power tools. Check for misalignment or binding of moving parts, breakage of parts and any other condition that may affect the power tools operation. If damaged, have the power tool repaired before use. Many accidents are caused by poorly maintained power tools.
- Keep cutting tools sharp and clean. Properly maintained cutting tools with sharp cutting edges are less likely to bind and are easier to control.
- Use the power tool, accessories and tool bits

etc. in accordance with these instructions and in the manner intended for the particular type of power tool, taking into account the working conditions and the work to be performed. Use of the power tool for operations different from those intended could result in a hazardous situation.

SERVICE

- Have your power tool serviced by a qualified repair person using only identical replacement parts. This will ensure that the safety of the power tool is maintained.
- Follow instruction for lubricating and changing accessories.
- Keep handles dry, clean and free from oil and grease.

USE PROPER EXTENSION CORD. Make sure your extension cord is in good condition. When using an extension cord, be sure to use one heavy enough to carry the current your product will draw. An undersized cord will cause a drop in line voltage resulting in loss of power and overheating. Table 1 shows the correct size to use depending on cord length and nameplate ampere rating. If in doubt, use the next heavier gage. The smaller the gage number, the heavier the cord.

Table 1: Minimum gage for cord

Ampere Rating		Volts	Total length of cord in feet			
More Than	Not More Than		25 ft.	50 ft.	100 ft.	150 ft.
0	6	220 V	AWG			
6	10		18	16	16	14
10	12		18	16	14	12
12	16		16	16	14	12
			14	12	Not Recommended	

SPECIFIC SAFETY RULES

DO NOT let comfort or familiarity with product (gained from repeated use) replace strict adherence to circular saw safety rules. If you use this tool unsafely or incorrectly, you can suffer serious personal injury.

Danger:

- Keep hands away from cutting area and the blade. Keep your second hand on auxiliary handle, or motor housing. If both hands are holding the saw, they cannot be cut by the blade.
- Do not reach underneath the workpiece. The guard cannot protect you from the blade below the workpiece. Do not attempt to remove cut material

when blade is moving.

CAUTION: Blades coast after turn off. Wait until blade stops before grasping cut material.

- Adjust the cutting depth to the thickness of the workpiece. Less than a full tooth of the blade teeth should be visible below the workpiece.
- Never hold piece being cut in your hands or across your leg. Secure the workpiece to stable platform. It is important to support the work properly to minimize body exposure, blade binding, or loss of control.

5. **Hold power tool by insulated gripping surfaces when performing an operation where the cutting tool may contact hidden wiring or its own cord.** Contact with a "live" wire will also make exposed metal parts of the power tool "live" and shock the operator.
6. **When ripping always use a rip fence or straight edge guide.** This improves the accuracy cut and reduces the chance of blade binding.
7. **Always use blades with correct size and shape (diamond versus round) of arbour holes.** Blades that do not match the mounting hardware of the saw will run eccentrically, causing loss of control.
8. **Never use damaged or incorrect blade washers or bolt.** The blade washers and bolt were specially designed for your saw for optimum performance and safety of operation.
9. **Causes and Operator Prevention of Kickback:**
 - kickback is a sudden reaction to a pinched, bound or misaligned saw blade, causing an uncontrolled saw to lift up and out of the workpiece toward the operator;
 - when the blade is pinched or bound tightly by the kerf closing down, the blade stalls and the motor reaction drives the unit rapidly back toward the operator;
 - if the blade becomes twisted or misaligned in the cut, the teeth at the back edge of the blade can dig into the top surface of the wood causing the blade to climb out of the kerf and jump back toward the operator.

Kickback is the result of saw misuse and/or incorrect operating procedures or conditions and can be avoided by taking proper precautions as given below.

- **Maintain a firm grip with both hands on the saw and position your arms to resist kickback forces. Position your body to either side of the blade, but not in line with**

the blade. Kickback could cause the saw to jump backwards, but kickback forces can be controlled by the operator, if proper precautions are taken.

- **When blade is binding, or when interrupting a cut for any reason, release the trigger and hold the saw motionless in the material until the blade comes to a complete stop. Never attempt to remove the saw from the work or pull the saw backward while the blade is in motion or kickback may occur.** Investigate and take corrective actions to eliminate the cause of blade binding.
- **When restarting a saw in the workpiece, centre the saw blade in the kerf and check that saw teeth are not engaged into the material.** If saw blade is binding, it may walk up or kickback from the workpiece as the saw is restarted.
- **Support large panels to minimise the risk of blade pinching and kickback.** Large panels tend to sag under their own weight. Supports must be placed under the panel on both sides, near the line of cut and near the edge of the panel.

To minimize the risk of blade pinching and kickback. When cutting operator requires the resting of the saw on the workpiece, the saw should be rested on the larger portion and the smaller piece cut off.

1 Triangular rule

Replacing carbon brushes

1. Limit mark

Remove and check the carbon brushes regularly. Replace when they wear down to the limit mark. Keep the carbon brushes clean and free to spin in the holders. Both carbon brushes should be replaced at the same time. Use only identical carbon brushes. Use a screwdriver to remove the brush holder caps. Take out the worn carbon brushes, insert the new ones and secure the brush holder caps.

1 Brush holder cap
2 Screwdriver

After replacing brushes plug in the tool and break in brushes by running tool with no load for about 10 minutes. Then check the tool while running when releasing the switch trigger. If it is not working well, ask your local BAW service center for repair.

To maintain product SAFETY and RELIABILITY, repairs, any other maintenance or adjustment should be performed by BAW Authorized or Factory Service Centers, always using BAW replacement parts.

ACCESSORIES

CAUTION:

- These accessories or attachments are recommended for use with your IDEAL tool specified in this manual. The use of any other accessories or attachments might present a risk of injury to persons. Only use accessory or attachment for its stated purpose.

If you need any assistance for more details regarding these accessories, ask your local IDEAL Service Center.

- Stool & Carbide-tipped saw blades

Combination	General purpose blade for fast and smooth cuts across and across.
Pressure treated/Weather	Designed for fast cutting of pressure treated and wet lumber.
Fine cross cuts	For sand-free cuts cleanly against the grain.

CAUTION:

- Be sure the blade is installed with teeth pointing up at the front of the tool.
- Use only the wrench to install or remove the blade.

To remove the blade, press the shaft lock so that the blade cannot revolve and use the hex wrench to loosen the hex bolt counterclockwise. Then remove the hex bolt, outer flange and blade.

To install the blade, follow the removal procedure in reverse. **BE SURE TO TIGHTEN THE HEX BOLT CLOCKWISE SECURELY.**

1. Hex bolt
2. Outer flange
3. Saw blade
4. Inner flange

When changing blade, make sure to also clean upper and lower blade guards of accumulated sawdust. Such efforts do not, however, replace the need to check over guard operation before each use.

OPERATION

CAUTION:

- Be sure to move the tool forward in a straight line gently. Forcing or twisting the tool will result in overheating the motor and dangerous kickback, possibly causing severe injury.

1. Base
2. Rear handle
3. Front handle

Hold the tool firmly. The tool is provided with both a front grip and rear handle. Use both to best grasp the tool. If both hands are holding saw, they cannot be cut by the blade. Set the base on the workpiece to be cut without the blade making any contact. Then turn the tool on and wait until the blade attains full speed. Now simply move the tool forward over the workpiece surface, keeping it flat and advancing smoothly until the sawing is

completed.

To get clean cuts, keep your sawing line straight and your speed of advance uniform. If the cut fails to properly follow your intended cut line, do not attempt to turn or force the tool back to the cut line. Doing so may bind the blade and lead to dangerous kickback and possible serious injury. Release switch, wait for blade to stop and then withdraw tool. Realign tool on new cut line, and start cut again. Attempt to avoid positioning which exposes operator to chips and wood dust being ejected from saw. Use eye protection to help avoid injury.

MAINTENANCE

CAUTION:

- Always be sure that the tool is switched off and unplugged before attempting to perform inspection or maintenance.

Adjusting for accuracy of 90° cut (vertical cut)

This adjustment has been made at the factory. But if it is off, adjust the adjusting screw with a hex wrench while squaring the blade with the base using a triangular rule, try square, etc.

1. Base
2. Adjusting screw

Do not support board or panel away from the cut.

- **Do not use dull or damaged blades.** Unsharpened or improperly set blades produce narrow kerf causing excessive friction, blade binding and kickback. Keep blade sharp and clean. Gum and wood pitch hardened on blades slows saw and increases potential for kickback. Keep blade clean by first removing it from tool, then cleaning it with gum and pitch remover, hot water or kerosene. Never use gasoline.
- **Blade depth and bevel adjusting locking levers must be tight and secure before making cut.** If blade adjustment shifts while cutting, it may cause binding and kickback.
- **Use extra caution when making a "plunge cut" into existing walls or other blind areas.** The protruding blade may cut objects that can cause kickback. For plunge cuts, retract lower guard using retracting handle.
- **ALWAYS hold the tool firmly with both hands. NEVER place your hand or fingers behind the saw.** If kickback occurs, the saw could easily jump backwards over your hand, leading to serious personal injury.

- **Never force the saw.** Forcing the saw can cause uneven cuts, loss of accuracy, and

possible kickback. Push the saw forward at a speed so that the blade cuts without slowing.

10. **Check lower guard for proper closing before each use. Do not operate the saw if lower guard does not move freely and close instantly. Never clamp or tie the lower guard into the open position.** If saw is accidentally cropped, lower guard may be bent. Raise the lower guard with the retracting handle and make sure it moves freely and does not touch the blade or any other part, in a langes and depths of cut. To check lower guard, open lower guard by hand, then release and watch guard closure. Also check to see that retracting handle does not touch tool housing. Leaving blade exposed is **VERY DANGEROUS** and can lead to serious personal injury.
11. **Check the operation of the lower guard spring. If the guard and the spring are not operating properly, they must be serviced before use.** Lower guard may operate sluggishly due to damaged parts, gummy deposits, or a build-up of debris.
12. **Lower guard should be retracted manually only for special cuts such as "plunge cuts" and "compound cuts."** Raise lower guard by retracting handle and as soon as blade enters the material, the lower guard must be released. For all other sawing, the lower guard should operate automatically.
13. **Always observe that the lower guard is covering the blade before placing saw down on bench or floor.** An unprotected, coasting blade will cause the saw to walk backwards, cutting whatever is in its path. Be aware of the time it takes for the blade to stop after switch is released. Before setting the tool down after completing a cut, be sure that the lower guard has closed and the base has come to a complete stop.
14. **Use extra caution when cutting damp wood, pressure treated lumber, or wood containing knots.** Adjust speed of cut to maintain smooth advancement of tool without decrease in base speed.
15. **Avoid Cutting Nails.** Inspect for and remove all nails from lumber before cutting.
16. **Place the wider portion of the saw base on that part of the workpiece which is solidly supported, not on the section that will fall off when the cut is made.** As examples, Fig. 1 illustrates the **RIGHT** way to cut off the end of a board, and Fig. 2 the **WRONG** way. If the workpiece is short or small, clamp it down. **DO NOT TRY TO HOLD SHORT PIECES BY HAND!**

17. Never attempt to saw with the circular saw held upside down in a vise. This is extremely dangerous and can lead to serious accidents.

18. Some material contains chemicals which may be toxic. Take caution to prevent dust inhalation and skin contact. Follow material supplier safety data.
19. Do not stop the blades by lateral pressure on the saw blade.
20. Always use blades recommended in this manual. Do not use any abrasive wheels.
21. Wear a dust mask and hearing protection

when use the tool.

SAVE THESE INSTRUCTIONS.

⚠WARNING:

MISUSE or failure to follow the safety rules stated in this instruction manual may cause serious personal injury.

Symbols

The following show the symbols used for tool.

V	voltage
A	amperes
Hz	hertz
~	alternating current
n	no load speed
□	Class II Construction
.../min	revolutions or reciprocation per minute
r/min	

FUNCTIONAL DESCRIPTION

⚠CAUTION:

- Always be sure that the tool is switched off and unplugged before adjusting or checking function on the tool.

Adjusting depth of cut

1. Lever
2. Scale

⚠CAUTION:

- After adjusting the depth of cut, always tighten the lever securely.

Loosen the lever on the depth guide and move the base up or down. At the desired depth of cut, secure the base by tightening the lever.

For cleaner, safer cuts, set cut depth so that no more than one blade tooth projects below workpiece. Using proper cut depth helps to reduce potential for dangerous

KICKBACKS which can cause personal injury

Bevel cutting

1. Clamping nut
2. Indication
3. Angle plate

1. Clamping nut

Setting bevel angle

Loosen the clamping nuts in front and back, and tilt the tool to the desired angle for bevel cuts (0°-45°). Secure the clamping screws tightly in front and back after marking the adjustment.

Sighting

1. Base
2. Top guide

For straight cuts, align the A position on the front of the base with your cutting line. For 45° bevel cuts, align the B position with it.

Switch action

1. Switch trigger
2. Lock-off button

⚠CAUTION:

- Before plugging in the tool, always check to see that the switch trigger actuates properly and returns to the "OFF" position when released.

To prevent the switch trigger from being accidentally pulled, a lock-off button is provided. To start the tool, push in the lock-off button and pull the switch trigger. Release the switch trigger to stop.

ASSEMBLY

⚠CAUTION:

- Always be sure that the tool is switched off and unplugged before carrying out any work on the tool.

Hex wrench storage

1. Hex wrench

Hex wrench is stored on the tool. To remove hex wrench, rotate it toward yourself and pull it out.

To install hex wrench, place it on the handle and turn it until it comes into contact with the protrusion on the handle.

Removing or installing saw blade

1. Hex wrench
2. Shaft lock
